Introduction

Risk management is the process by which risks are identified, evaluated and controlled. It is a key element of the framework of governance together with community focus, structures and processes, standards of conduct and service delivery arrangements. (Audit Commission – Worth the Risk: Improving Risk Management in Local Government (2001:5))

This document has been produced to enable Lanreath Parish Council to assess the risks that it faces and satisfy itself that it has taken adequate steps to minimise them. The Council is aware that although some risks can never be eliminated fully, it has in place a strategy that provides a structured, systematic and focused approach to managing risk, which:

- Identifies the subject;
- Defines the risk:
- Identifies what the probability of the risk occurring, taking into consideration the existing management procedures in place (risk barriers)
- Identifies the likely severity of the consequences if the risk occurs taking into consideration the existing risk barriers
- Identifies the risk level as a product of the probability and consequence of the risk occurring;
- Evaluates the existing risk barriers: and
- Reviews, assesses and revises procedures to provide additional risk barriers if required.

The risk level is determined using the following Risk Matrix:

Risk Category and Probability Definitions	Consequence (1)	Consequence (2)	Consequence (3)
Risk Category Health and Safety (HSE)	Minor injury, no medical treatment required.	Injury or illness requiring medical treatment.	Permanent disability or fatality.
